

Amsonia tabernaemontana 'Storm Cloud'

BLUESTAR

'Storm Cloud' Blue Star is the prettiest Amsonia we have seen, with large terminal clusters of bright sky blue star shaped flowers set off by almost black stems, the stems are particularly showy as they emerge in the spring, looking like thin black Asparagus. The narrow leaves open to an attractive dark green. Amsonia 'Storm Cloud' was found in moist shade in Alabama by those extraordinary plantsmen, Tony Avent and Hans Hansen, and they picked a particularly apt name for this beautiful native.

Category: Perennials
